

Cenium Hotel Management Products

Cenium AS

Cenium is the developer of the Cenium Property Management System (PMS), successfully proven by resort, city and business hotels in Norway, Sweden, Denmark, Iceland, USA and Asia. Cenium AS is located in Norway and has a reseller network in USA, Europe, Asia and the Middle East.

Cenium applies to all functions of operating hotels, as shown above.

Cenium's product line. Cenium PMS, Cenium Conference and Cenium SPA all use the common platform Cenium Base.

Cenium's Success Factors

Scalability

Cenium PMS is the core application for operating hotels ranging from single installations to 100+ hotel chain. Ease of implementation and large scale operating benefits appeal to this wide range of markets.

Local or Hosted Solution

Cenium solutions can either be installed on a local server or operated as a hosted solution with thin clients. The hosted solution has proven to be very effective for large chains where the initial roll out pace is required to reach, or even exceed, 1 hotel per week.

24/7 Support

Cenium provides 24/7 support either directly to the end users or through the Microsoft Partner Network

E-Learning

Cenium offers an e-learning program that greatly accelerates the roll out to hotels. The program allows for training and testing of users, reporting the progress of individuals and degree of readiness to start using the system.

Versatility

Cenium provides solution that allows managers to use their existing work methods, also adding industry standard work processes delivered with the system. The result is best of breed solutions suitable for each particular hotel or hotel chain.

Multinational operations

Commonly, the market requires combining operations from differing markets. Cenium's solutions have been implemented in markets with widely differing tax rules and variation in operating procedures. The solutions are also based on Microsoft Dynamics NAV that is already localized for most markets.
